

Readable English palindrome progress

Evidence update - 20 September 2026

The project is still pursuing one thing: a long, genuinely readable English letter-level palindrome. Exactness is mechanically verified; readability is a blinded human judgment.

Acceptance target

An original, coherent, intact English palindrome longer than 38 letters, followed by randomized blinded intact-versus-shuffled reader evidence. No word-order symmetry, repeated/self-palindromic units, catalogue text, punctuation trick, fragment, or gibberish qualifies.

The claim that is safe to make

Best admitted exact candidate: 38 letters. **Named v4 diagnostic:** 132 letters. Historical rendered artifacts reach 142 letters of exact gibberish, and synthetic exact fallback controls reach 100,001 letters. These are different scopes; none is currently original, coherent, shortcut-clean, and ready for readers.

Current benchmark

An aide rips nine memos; some men inspire Diana.

Normalized tape: anaideripsninememosomemeninspirediana | 38 letters | two-pointer exact = true | forward/reverse SHA-256 = ce71723a3eab38613adeb89c3ce18bab20286d91e6bcee20b25d3f4a724184c6

What the public API inspired

The live site demonstrates a valuable fast lexical mirror-state search and an inspectable word-to-mirror interaction. Its 1,198-letter demo is visibly word salad, not intact English prose. The active v4 design borrows the scalable character-orbit/index idea and the provenance-friendly inspection UX, then intersects it with typed grammar, agreement, valency, and semantic scene states before rendering a candidate.

Exact diagnostics: retained, not promoted

Every row below is mechanically exact and independently audited, but each has a concrete rejection reason. None has been sent to readers as a success.

Length	Rendered diagnostic	Disposition
44	Was Noel an era, a gas, an item? Met in a, saga, arena, Leon saw.	Best human-looking diagnostic, but contains a proper self-palindromic multiword span and a fragmentary answer.
47	Some mad loss went save no level; one vast news sold a memos.	Malformed clause boundaries and determiner/noun agreement.
50	To new one post is an evening. Is sign in even as its open owe. Not.	Mechanically admitted, but incoherent and not reader-certified.
56	No evil Noel deliver desserts raw; war stressed reviled Leon live on.	Aligned whole-token semordnilap chain; withdrawn shortcut.
66	Erased on forever event is an evening. Is sign in even as it never ever. Of nodes are.	Hidden proper self-palindromic span; not admissible.
132	Name not left onto her a. Set add new one last one. Can all its an aide rips nine memos some men inspire Diana still an. Ace not sale now end dates. Are hot not felt one man.	Embeds the complete 38-letter anchor; explicit shortcut.
142	wanders remembers follows patient near remembers follows remembers patient still ll it st ne it ap sr eb me me rs wo ll of sr eb me me rr ae nt ne it aps wo ll of sr eb me me rs red naw	Historical open-vocabulary artifact; visibly fragmented/gibberish and never reader-eligible.

Fresh constructions run in this update

Lane	Actual result	Next construction
Packed sentence-plan boundary DP	1,200 recursive plans packed to 195; four length-band buckets; 0 reverse-compatible states; 0 exact; three intact prose controls.	Add typed agreement features to the packed boundary state.
Corpus phrase WFSA	5,791 templates and 3,501 role/boundary index keys; 50,000 live states; 44,935 character prunes; 0 exact.	Add a typed finite-clause transition while keeping source-separated controls.
Semantic-frame character WFST	4 event frames x 4 settings; 80 best-first states and rendered controls to 83 letters; 0 exact.	Intersect variable-depth scene trees while carrying residual obligations.
Constructive scene lattice	81 indexed complete-prose states; 8 diagnostic controls; longest 103 letters; 0 exact.	Carry residual boundary classes across a second discourse relation edge.
Typed center-state WFST	36 typed scenes; 7 WFST states; explicit odd/even center parity and clause depth 0-2; 120 controls to 101 letters; 0 exact.	Increase typed clause-depth branching without dropping parity state.
Character-orbit scene residual	4 independent frame pairs; 160 controls; 40 mechanical exact rows, 0 exact-clean; 1,200 memoized states.	Add relative-clause and adjunct frames to the frame/word/residual product.

Lane	Actual result	Next construction
Lexical reverse automaton + Luna frontier	Brown trie: 2,058 renderings, 2,401 states, 74 letters, 0 exact-clean. Follow-ups: object-gap/ditransitive/benefactive/boundary3/instrumental/temporal-subject-relative/right-benefactive/right-instrumental/matrix-perfect controls to 87/142/119/64/70/177/108/110/186 letters; all 0 exact-clean. Endpoint-indexed reverse grammar reached 4 states/2 frontiers with 0 complete pairs. A 286,561-letter dynamic inventory is exact but catalogue-like word salad.	Expand typed role classes only at new endpoint or grammar frontiers; keep the reader gate closed.
Typed agreement false-positive replay	Five asymmetric templates; 1,981 live nodes; determiner/noun and subject/verb number carried before closure; 0 agreement-valid exact rows. The two malformed 39-letter broad-POS controls stay diagnostic.	Add transitive/intransitive valency to the live residual key.

The actual reader-facing test

The reproducible package contains intact prose and word-shuffled controls, randomized blinded order, separated answer keys, and a rater protocol. It remains closed to rejected exact diagnostics. The next candidate that passes exactness, provenance, and intact-prose review will enter that package; no programmatic score will substitute for readers.

Method and handoff

The API and paper now report the ledger without ambiguity:

Field	Current value
best_admitted_exact_letters	38
longest_named_v4_diagnostic_letters	132
longest_rendered_historical_exact_artifact_letters	142 (gibberish)
longest_synthetic_exact_fallback_letters	100,001 (non-English control)
reader_evidence	Pending; no rejected diagnostic is promoted
generation policy	Constructive only: grammar, semantic roles, and mirrored character obligations are selected together; no post-hoc repair.
next reader-facing test	Randomized blinded intact-prose versus shuffled-control rating with reproducible provenance.

Recent committed method work

0fc9f8dc packed sentence-plan boundary DP; f6a4e140 lexical reverse-trie grammar; 70b76dc9 first Luna frontier; b2f26d50 relative attachment; 57b56059 ditransitive/relative seams; 89696892 two-character boundary; b11af302 object-gap relative; 1c1c8f15 boundary3; 1aab9d70 benefactive/subject-relative; f440a03d temporal subject-relative; 4bad44d4 boundary-diverse instrumental-relative; de3ada73 right benefactive-gap; 092bde72 right instrumental source-gap; dd91cfa5 matrix-perfect temporal; typed-agreement replay (remote) false-positive filter.

Bottom line

The public API is inspiring as a search/indexing and inspection reference. It does not change the success criterion: the next claimed win must be an actual long English palindrome that survives independent exact validation, novelty/shortcut checks, and blinded readers.
